I have the same education as Star Trek's Science Officer Spock who knew the math to figure out the odds of the winningest way to go. I got my degree in Electrical Engineering and scored 100% in Physics at Carleton University. Lucky me, Carleton had the very best Engineering curriculum possible at the time. Rather than take Civil, Mechanical, Electrical courses in first year and then specialize in the last 3 years, I got to study Civil, Mechanical, Electrical courses for 3 years using 3rd year Math and only specialized in Electrical in my fourth year. I was one year away from a degree in Civil and Mechanical too. <http://SmartestMan.Ca/diploma.jpg>

I had first started playing Poker in high school. I was a winner in general and we played off and on with school chums for the next two years until I graduated. I also remember one night I lost everything I had and it was a most depressing experience. Several of my high-school classmates went to Carleton University where we continued playing Poker in the student lounges.

In 1974, Carleton offered a course unique to Canada which was to change my life's direction called Math 69:140, the "Mathematics of Gambling" taught by Dr. Walter Schneider who had also taught me my second-year engineering mathematics and played in our friendly legal no-rake-off Poker games. I took it as an option.

After reading several books, my winning rate at Poker increased by 150% from \$8 an hour to \$20 an hour! One day, Walter and I were having lunch at a local restaurant and hit upon the notion of an "optimal betting" curve which could guarantee, when in the lead, never giving an opponent a situation where the odds are good enough for him to call. Such a computer analysis had never been done and Walter suggested that I apply to have "A COMPUTER ANALYSIS OF CANADIAN STUD POKER" accepted as the fourth-year engineering project. Canadian Stud, the most popular game in Canada at that time, was played just like five card stud but where one

pair was beaten by a four straight which was in turn beaten by a four flush which was then beaten by two pairs. A simple variation. My project was presented to the Third Conference on Gambling at Ceasar's Palace in Las Vegas on Dec. 21, 1976.

I got the nickname John "The Engineer" not by Carleton's engineers but by Carleton's gamblers!

The course taught me about casino games that can be beaten and games that cannot. I learned how to count cards and beat Blackjack. In November 1974, I went on my first 5-day 4-night junket to the Thunderbird Hotel & Casino in Las Vegas. I needed to bring a bankroll of \$3,000 and had to bet a minimum of \$15 for at least 10 hours over the 5 days. I didn't have \$3,000 so I approached my mother who went to the bank to borrow the equivalent of 2.5 years worth of rent to send me to Vegas to take on the pros. That's what I call faith. Not many mothers would go borrow to provide their sons with money to gamble. It sure did pay off though. Maybe my proficiency in betting on winners is genetic?

I learned the Revere Point Count system a few days before leaving and after playing a total of 40 hours, I ended up with a \$1600 profit. A nice start to my junketing career. I went on junkets to almost all the casinos in Las Vegas. From 1974 to 1979, I traveled on over 55 different junkets. The most unique was a trip aboard Caesar's Chariot, a converted 707 that seated only 45 passengers. It was the most opulent luxurious plane I've ever seen. Then the bubble burst. I was on my second junket in a row to the Hilton Hotel. I had won \$5,000 on my first all-expense paid junket there and was quickly up another \$5,000 on my second trip. The Hilton offered one deck in those days which I could beat at about 4%, a very hefty advantage. I was betting from two hands of \$25 up to 3 hands of \$200. After a particularly great session and after a particularly great feast, before I could start playing again, a pit boss took me aside and said "Mr. Turmel, we would appreciate it if you would restrict your action to the craps tables." I asked why. "You mean you don't know?" I said "You've got your fair chance to break me." He answered "No, sir, we have no chance at all." And that was it for the Hilton. No more wonderful complimentary junkets at one of the nicest hotels there. Even though I tried to better disguise my play at other hotels, the Sands hotel's pit bosses eventually became hostile and I noticed the words "Do not invite" written across my file as I checked out.

I turned out to be Walter's star pupil and he gave me an A+. I was making so much money on junkets and playing poker around Ottawa that Professor Schneider suggested I not take an engineering job but become his Teaching Assistant in the Gambling Course for the next 4 years. So rather than become a professional electrical engineer, I chose to specialize in the profession of gambling, "statistical engineering," and became the teaching assistant of the Math 69:140 course until 1978 when Prof. W. Schneider had to dismiss me for running a highly-publicized Blackjack game in the Carleton Faculty Club as part of my legalization campaign.

I knew that as long as no one was excluded from being the bank at Blackjack, I could play it in Canada so I developed "U-bank" rules and started running Blackjack games around Ottawa for the next 20 years. I was first raided in 1977 at my home game on St. Laurent Blvd. But when I heard a commotion upstairs, I escaped out the back door but when I later called the house to learn it was the police, I gave myself up. I was charged and convicted of keeping a common gaming house and fined \$500. Now that I had a criminal record for gambling, there was no stopping me. I was charged six times including once on a boat on the Ottawa River.

In 1978, the Supreme Court "Rockert" decision ruled that that a one-night stand was not a gaming house because it did not impugn the reputation of the neighborhood. So I started running a transient casino at party rooms all around Ottawa: "Have Game Will Travel." So the Crown raided me and charged me with possession of a gambling device, the deck of cards, which was still in the Criminal Code. So I laid an information against Simpsons Sears for possession gambling devices being sold. No action. Judge Bernard Ryan said "this makes everybody who has a game at home guilty." He fined me a small \$200 making me the last person in Canada to

be convicted of possession of a deck of cards.

So if a 1-night stand does not impugn the reputation of the neighborhood, I started a game on a boat “Ville de Vanier” on the Ottawa River and got rid of the neighborhood. I told the judge, I didn’t hear the fish complaining. I was convicted and fined \$500.

But, finally, after being raided in 1988 at the Bayshore Hotel, Judge Fontana was the first judge to see the fairness of my “U-Bank” rules and acquitted the found-ins of being in a gaming house because they could all bank me back. Judge Lennox then had to find me not guilty of keeping a gaming house. It didn’t matter.

HULL POLICE OPERATION BLACKJACK

In 1991, I had opened up on Main Street in Hull Quebec and after a well-televised raid “Operation Blackjack” I was again charged with the same offence even though I had been “autrefois acquit!” (formerly acquitted). They showed a distinct linguistic inability to grasp Judge Fontana's reasoning. I was convicted anyway because “win” is “gain” in French and “gain” is in the Criminal Code Gaming house definition though it meant gain from taxable sales, not non-taxable winnings. Le Droit cartoon headline “Turmel sentenced to 4 months detention” and said “Now I can only play solitaire.” I did 1 month before being released.

O.P.P. PROJECT ROBIN HOOD

I was again in 1993 charged after returning to Ontario where the English language posed no such difficulties. I first ran in the basement of my Nepean home since the Nepean Police had said in the past that they would not raid me there. Then I moved to a location in the Baxter Plaza with 4 Blackjack tables and 3 Poker Tables.

With no hassles in 8 months, I then moved to a large entertainment complex at the Topaz Plaza. And I started a game in a large Toronto warehouse and had huge packed houses for 6 months with Toronto police coming to inspect.

Daniel Negreanu, <https://www.wsop.com/players/profile/?playerid=267> a now-famous Poker tournament winner, started coming to my rake-free game. Bet it’s the only one he ever played in and no rake certainly helped make him a winner. Though busy with politics, I popped in one night to play a few hours tried to bluff him off pot. He had two pairs Aces-Up and couldn’t fold. Didn’t think much of it at the time but once Daniel had made a name for himself, Frank Gentile, a math prof who played in my early Casino Turmel Toronto games, and told me the story about my trying to push him off the pot. The Great Canadian Gambler being called down by the Great Canadian Tournament Winner. Funny that Daniel Negreanu would have clashed in his youth

in one of my first big underground casinos.

Yet, I knew problems were brewing when they telephoned to inform me that I must close down my Toronto game or they would charge me no matter what the Ottawa judges had said. I wonder how many times the Sheriff told Jesse James to take his illegal gain and get out of town or he'd be charged. If my Toronto Poker and Blackjack parlor was really illegal, why did they let me get away? I can only conclude they were on shaky ground and knew it. It was political rather than judicial force I was dealing with. Still, to avoid the legal harassment of my dealers and gambling acquaintances, I closed down in Toronto rather than be charged which might have also emboldened the Ottawa police to raid my Ottawa game and bused my Toronto dealers to Ottawa for 4-day shifts to keep their jobs.

Having fought for so long and paid the penal price to find a way to run my kind of casino legally, I thought I'd finally punched through. With that acquittal, I thought I had won myself many years of lead time to establish my kind of legal casinos in Ontario before the government could establish theirs. I had meetings with the police every step of the way. My winning formula for small and medium "Mom-and-Pop" "Cheers-with-chips" Poker and Blackjack Parlors went from 10 employees to 100 in its third six months and grossed winnings of over \$3 million.

They faced another problem in dealing with me. Ever since my first raid when I went broke paying a lawyer to defend me, I've been doing my own legal representation. Rather than be limited by the cost of having to pay a lawyer, doing it myself has allowed me to fight as hard as possible for the least money. Taking on that legal responsibility has also allowed me to become a guerrilla lawyer for hundreds of other cases. I had won my case in 1989 myself which might reinforce my case for being not only an expert in the mathematics of gambling but also an expert in the law of gambling.

The proper procedure to challenge my Ottawa games would have been for the Crown to have made an application to the Ontario Court of Appeal for an extension of time to appeal the first two acquittals. Supposedly, only a panel of three judges of the Court of Appeal may conclude differently than the trial judges. The problem with doing it the right, the legal way, through the Court of Appeal was that it would have left me acquitted and open while we argued. And they had to close me down or I got too big. To stress that only the Court of Appeal had power to overturn the first two acquittals and let them raid my Topaz game, I made that application for them to the Ontario Court of Appeal and offered to consent to the extension of time for the Crown to appeal since they themselves hadn't thought to ask. The Crown didn't want to appeal and Justice Finlayson couldn't grant the extension the Crown themselves would not ask for.

So the pressure continued to build. There were television interviews. There were stories in the newspapers. The politicians were complaining on the media. The Mayor of Ottawa had bemoaned her having to wait for government permission to open a casino while I was just going ahead and doing it. Other politicians were demanding something be done. You just don't expect to survive that kind of heat even if you're legal.

I was staying in Toronto and when I visited Ottawa one day, I got wind that the O.P.P. had arrived in town to bust the game when I showed up that evening. So I hid out in Arn prior to prepare a press release announcing at a press conference the next day right in front of Bob Rae's office at Queen's Park in Toronto the expansion to Toronto, Niagara Falls and Brockville going from 100 to 1000 employees hoping for another \$30 million. And another 10-fold increase in jobs from 1,000 to 10,000 across Ontario in another 6 months for another \$300 million before taking my loophole to the other provinces. I later heard they called off the Ottawa raid and busting me at the Queens Park press conference in Toronto thinking I was trying to trap them. But it got me another 2 months of operation and most of my winnings.

A famous gang of burglars hit my Casino Turmel Topaz in Ottawa busted in 1993 in O.P.P Project Robin Hood. The cops knew what I was doing with my money. My Casino Manager, Pauline Morrissette, <http://johnturmel.com/robin.jpg> reported we were building new tables so fast that some had not had their chip trays screwed in. Just their lock-tops to seal in the chips. Who'd try to walk out with a whole 20 by 12-inch chip tray? Pauline suspected it was a bunch she called the "pirates!" I read their book about it years later: "The Champagne Gang: High times and sweet crimes" Paperback – Jan. 1 1998 Jeremy Mercer "The story of a clean looking, high living gang of Canadian thieves. They looked like they just stepped out of a fashion catalog, but had pulled off over 120 successful burglaries." <https://www.amazon.ca/Champagne-Gang-times-sweet-crimes/dp/1895629977/>

Page 104: August 23 1995 Las Vegas, Nevada

The best was last year when he had come out after robbing an illegal casino in Ottawa. The place was usually open 24-hours a day, but the guy who ran it closed the place down once a year for cleaning. Kevin broke the lock on the door, snuck in past the cleaners and grabbed \$45,000 worth of chips before anyone knew what was going on. He was in and out in less than 90 seconds. The next day, before the chips were noticed missing, he and some friends came in and took turns cashing in the hot chips. After paying off his buddies, Kevin had \$35,000 in his pocket and caught the next flight to Las Vegas. The money lasted 4 days.

But the camel's back really started to break for me when the Ottawa Citizen ran a huge front-page story titled "It's no bluff: Casino owners flush with success" detailing my 28-table 100-employee Casino Turmel at the Topaz Entertainment Plaza in Ottawa. The story explained how I had been raided many other times before finding a loophole in the gambling laws which got my last casino acquitted of being a gaming house in 1989. This explained why my Poker and Blackjack parlor was so big and why it had operated in public for over a year and a half without police intervention. <http://SmartestMan.Ca/gambler>

Sure enough, two days after the big front-page Citizen news story, my cellular phone rang and Sgt. Bob Cleary of the Ottawa Police Services informed me that they and the Ontario Provincial Police had just raided Casino Turmel in "Project Robin Hood." The Charter Right not to be charged again once acquitted seemed not worth the paper it's printed on when the government wants to stop you. He asked me to come in and give myself up on their search warrant or they'd issue a Canada-wide arrest warrant for me.

I was in no mood to save them trouble and hid out in Toronto. Sgt. Cleary kept calling my lady, Pauline Morrissette, asking that I give myself up but I stayed holed-up in Toronto writing my Defence Affidavit in verse, iambic pentameter of over 400 lines telling my story. Finally, on July 20, the Ottawa police announced at a press conference that a Canada-wide arrest warrant had been issued. I would have loved to have seen the reaction of officers patrolling Canada's lonely highways when my arrest warrant came over the air: "Project Robin Hood: Be on the lookout for John Turmel. Dangerous with a deck of cards." That's right. The latest criminal to hit the wanted posters was John Turmel, professional gambler. I made a bee-line to Ottawa to give myself up. <http://johnturmel.com/topazint.htm>

On July 21, 1993, 3a.m, I woke up stiff and groggy but the cold steel cot soon reminded me why I was in an Ottawa Police jail cell. Project Robin Hood. Laying on my back using my jacket as a pillow, I saw the same kind of graffiti on the ceiling I had noticed upon my first visit to the old Ottawa jail as a manacled guest in 1977. Burned into the ceiling were names and their lives of crimes: "Vince Violencia, assault with a deadly weapon!" "Tommy Latrouble, robbery with violence!" So I wrote my alleged indictable offence with my matches: "John Turmel, gambling with cards!"

Things had started to look bad for my bank-roll the moment Bob Rae became premier of Ontario and announced that they were opening the first casino in Windsor and becoming my competition in the gambling business. As a poor-kid entrepreneur, I had run against the rich-kid socialist in a 1982 by-election in York South

and I doubt Bob can forget his drubbing in our debates. My government competitor wasn't being run by someone who had happy memories of tangling with me.

The real problem was that I had Blackjack betting limits of \$300 while the limits were \$10 for Bob Rae's government-licenced casinos. My private casino was open for action 7 days a week 24 hours a day. With no rake-off at the Poker while Bob's casinos didn't have poker at all, it was a combination that couldn't be beat. I figured my loophole could have made me a billionaire within a couple of years while creating a new industry my way and tens of thousands of jobs in the process. I had to be stopped or I'd get rich and lend all my gambling winnings out interest-free all around the world. The Sheriff's men did, after all, call it "Project Robin Hood" for good reason.

I had gambled that if they left me alone, I'd always be able to pay the government its 50% in income taxes from the second half of the year. So in the first half of the year, I spent it all, after expenses, as fast as it came in. And I spent it all on Greendollar Local Employment Trading Software LETS promotion and development and charity. So now I owe Revenue Canada over \$300 thousand which I'll never be able to pay. Another problem was that after not one but two Provincial Court judges at Ottawa had ruled that Turmel-style gambling does not fall under any of the five (5) definitions of a gaming house, they hadn't appealed because the two judges were right. My Poker and Blackjack Parlors in Ottawa and Toronto did not fall under any of the five definitions.

Hours on that cold cot before my bail hearing made me curse my judgment. I should have given myself up in the morning and been spared the night on the cold steel bed. Giving up after a 4p.m. press conference made for a long night waiting until court in the morning.

I made a motion for "autrefois acquit" (acquitted before) but it was dismissed.

The plea of "autrefois acquit" requires that the previous verdict arise from the same transaction on which it is later purported to try the accused. Consequently, the plea of *autrefois acquit* was not available where the accused had been previously acquitted of keeping a common bawdy house in relation to two similar operations at other locations. The "matter" before the judge on the previous trial was not the same as that before the trial judge in this case because the matters involved different factual transactions. Multiple prosecutions under the same statutory provision are permitted if each prosecution arises from a different physical act or from separate transactions: *R. v. Turmel* (1996), 109 C.C.C. (3d) 162 (Ont. C.A.).

I was acquitted at the Bayshore Hotel game in 1988 but because this was at a different time and place, the same Blackjack game could be convicted in 1993. Canadian Justice.

Worse news, Crown Attorney Andre Marin was also throwing in the silly charges of keeping a betting house, being in the business of bookmaking and controlling monies from bookmaking. As bookmaking is betting on events in which you do not participate and gaming is betting on events like cards where you do, bookmaking charges were never laid against my card games. Adding bookmaking charges that will later have to be withdrawn or lose was simply to make their weak case look stronger. Look at all those charges. The Crown did withdraw the betting house show charge on the day of the trial and proceeded only with the gaming house trial.

The next day, many of our 122 casino employees marched outside the courthouse to protest losing their jobs. But there was nothing that anyone was going to be able to do about it. Now that the government had decided to use the justice department to attack me again, even if I was acquitted again, the head-start I had in the industry would be gone. If they show no case for charging a formerly-acquitted person again, it will be safe to say that

I'm one of the biggest robbery victims in Canadian history, with the Government of Ontario doing the robbing. Should I be acquitted once again, you can bet I'll sue them for the billion. Sadly, I was convicted when the judge changed the meaning of the word gain to convict me.

"gain" – As used in para. (a), "gain" can include direct winnings. Consequently, where the accused was an exceptionally skilled professional gambler who supported the commercial gambling establishment and paid employees out of his large winnings, the premises fell within the meaning of "common gaming house": *R. v. Turmel* (1996), 109 C.C.C. (3d) 162 (Ont. C.A.). § 197

The "Strict Interpretation of Criminal Statutes" allows a judge to lessen the scope of the written law to acquit but does not allow a judge to expand the scope of the law to convict. And there it is, right in the Criminal Code, the law was expanded so winning that had never been illegal before could be now be convicted as "gain!" That's how the Court had to improperly expand the meaning of gain to include winnings to convict me!

When I was convicted in 1981, Judge White gave me 200 hours of community service playing my accordion in hospitals and old-age homes. I was pretty good. I won a talent contest in Welland in the late 1950s, and came 4th in the Canadian Championships in the early 1960s. I hadn't been playing much in my high-school and university years and so I finally was forced to practice on a regular basis. And once my service was up, I couldn't stop with so many elderly counting on their monthly entertainment. It's nice to think I'm remembered as the last good time on Earth for so many souls now in Heaven.

The police were also searching for the \$3 million as the proceeds of my crime. It had been different in Toronto. There, the police had told me to get out of town with my ill-gotten gains or they'd charge me. The Ottawa Police gave me no such choice. If I lose, penalties might be stiff. The new Proceeds of Crime laws mandated that I had to be left broke to avoid going to jail. Luckily, as reported in the July 10 1994 Ottawa Sun Quote of the Week: "I knew they weren't going to let me keep it so I spent it all." But the Crown asked for a fine of a million which meant up to 10 years in jail for a broke man who can't buy his way out. But Judge Peter Wright ruled that jail was for those who had hidden the proceeds and not for me who had spent it all running for Prime Minister in the 1993 federal election and sentenced me to 200 hours of community service.

Abolitionist (abolish debt slavery) Party of Canada Programs <http://SmartestMan.Ca/abprogs>

Playing for a deal

By **MINDELLE JACOBS**
Ottawa Sun 941230 F4

Local card shark John Turmel brought his accordion to court yesterday and squeezed out yet another delay in his sentencing for illegal gambling activities.

Turmel's sentencing date was adjourned until March so he and the Crown can work out a mutually acceptable estimate of his gambling income.

Fresh from a poker-playing spree in Atlantic City, the professional gambler had planned to play the accordion to convince the judge to impose a community service order instead of a jail term.

Instead Turmel, who was convicted in May of keeping a common gaming house, only got to show off his musical talents to reporters.

"They don't call me colorful for nothing," the 43-year-old laughed as he pulled the accordion out of its box for an impromptu musical interlude outside the courthouse.

The Crown wants Turmel's assets seized under a criminal code provision that deals with the proceeds of crime.

Crown attorney Bernard Dandyk told Judge Peter Wright police estimate Turmel grossed \$1.5 million in proceeds from his casino operations.

But detectives can only trace what happened to \$300,000 of the money, Dandyk said.

Turmel argued it's unfair to penalize him for his gross winnings, saying most of the proceeds went toward dealers' salaries and player winnings.

"If they're trying to hit me with a fine for all these monies, they have to prove I ended up with that," he told the judge.

To avoid further lengthy court wrangling, Turmel and Dandyk discussed the issue during a court recess and agreed on a figure of \$150,000, Turmel said.

"I'm going to admit to (gaining) that amount of money," he told reporters.

■ **JOHN Turmel serenades reporters outside the Elgin St. courthouse yesterday. Turmel had planned a courtroom performance, but his sentencing was postponed until March.**

EXPERT WITNESS IN FEDERAL TAX COURT OF CANADA

I was accredited an expert witness in the Mathematics of Gambling in the case of one of successful gamblers Tony Epel who had to explain where he got all his money: natural talent at poker.

<https://www.canlii.org/en/ca/tcc/doc/2003/2003tcc707/2003tcc707.html>

POKER

Since that conviction, I've been playing Poker professionally in legal casinos in Ottawa, Toronto, Atlantic City New Jersey, Arizona, California, and Mississippi.

POKER POWER TOOLS

My engineering specialty is condensing and systematizing masses of statistical gambling information into mechanical fingers-and- toes applications. Call it mental software. I call them Poker Power Tools. I have engineered 30 of them. The system I derived and published in the rec.gambling.poker newsgroup to quickly

determine "a priori" odds and the Two-Step Point Count system to determine the necessary calling odds are good examples of reducing great masses of information to a simple usable algorithm.

In 1989, I engineered an exceedingly fast system for making very close approximations of the required pot odds using what I called the Turmel Two-Step Poker Point Count System which anyone can use to almost instantaneously evaluate their Holdem hand. Most Poker players know the basic odds: with 4 winning cards to make an inside straight, and 42 losing cards, if you're going to lose 10.5 for every one time you win, how many bets must you win once to break even? More than 10 is an overlay, under 10 is an underlay! With 8 winning "outs" for a two-way straight, you need 5 bets to break even. With 9 winning outs for a four-flush, you need 4 bets to break even. But Holdem offers draws with 1, 2, 3, 5, 6, 7, 10, 11, 12 up to 25 outs. So I figured the outs for all of them so I could 1) count my outs and 2) know the required odds to stay, the Turmel Two Step:

Outs: 1 2 3 4 5 6 7 8 9 12 15 18 21

Odds: 45 22 14 11 8 7 6 5 4 3 2 1+ 1

I've been using it since I devised it in 1989 and my success at the tables everywhere is testament to its power. Where top pros were winning 2 bets per hour, my win rate of 3.5 bets per hour made me the winningest limit player on the planet for 25 years.

The one thing the Canadian Stud analysis discovered was that the smaller your edge, the more aggressive you have to be. Having a system which helps you determine when you have those small edges and forces you to become super aggressive startles people when they finally see your cards. I've been called names ranging from "the Maniac" "Raising John" to "the Engineer" or "the Professor." At the same game! I've developed other Poker Power Tools that are easy to learn and of untold value. I seem to make use of them all on a regular basis and would bet that they become part of every professional poker player's arsenal of techniques when I publish them. <http://SmartestMan.Ca/tajprofessor> has videos with some of them.

I've never seen any other consistent winners play like me. This system calls for raising wars on cards one doesn't expect to be able to raise with and people are always punished more when you hit a hand they didn't expect you to hit. People are always rolling their eyes when they finally see the "crap" I caught with to take down a pot. One of the better players said: "I won't play with you without real power because I don't need the variance" after he had just folded a stronger hand pre-flop than I had raised with. When the Turmel Two-Step Poker Point Count System becomes widely-known, I'm sure Holdem will be played much more aggressively by all.

Every card game its guy they call The Professor. I was The Professor at Trump Taj Mahal in Atlantic City used in the movie Rounders with Matt Damon playing under the chandeliers: "We don't play together but when did you ever see one piranha eat another?" <http://SmartestMan.Ca/gambler> details the adventures for my 42-year professional gambling career. <http://SmartestMan.Ca/credits> has my gambling credentials. I wrote a book on my Turmel Two Step Out-Odds system but took it down when they ad published the 1-page system.

https://books.google.ca/books/about/Play_Holdem_Poker_Like_a_Bookie.html?id=rGFPngEACAAJ

I may not appear that much brighter than anyone else and my 99.9999% is not even full 1% better than your 99%, But how much worse is your 1% error making 10 thousand mistakes in a million compared to my 0.0001% making 1 mistake in a million? Your 1% error is 10,000 times worse than my 0.0001% error! And if I make no mistakes at all, as in Backgammon where most learn to bear men off perfectly, then your 1 mistake is infinitely worse than a perfect bear-off. Asking "How much better is my almost 1% over you?" versus "How much better is my 10,000 times less errors?" tells a different story. I have been accredited six times by courts in Ontario and Quebec and Federal Court to give expert testimony in matters related to gambling.

TOURNAMENTS

In 1985, I began hosting the annual Ottawa Region Holdem Poker Championships. In 1991, I began hosting the annual Canadian Open Holdem Poker Championships won by Greg Petriv of Toronto. Bill Liston of Ottawa won it in 1992. Robby Gingras, who has gone on to win some other major tournaments in California and was recently seen on television at the Toronto Holdem tournament, won in 1993. Tony Laughing Jr., son of Tony Laughing who ran the Akwasasne New York Indian reserve's largest Poker palace before being shut down, won in 1994. Steen Rassow from Cardinal, Ontario won in 1995 and 1996, the toughest player I've ever faced. He and his wife Lynn are well-known in Poker rooms around Canada and the United States.

FAMILY ROOTS

Grandfather Adelard Turmel was born in rural Quebec in 1898. In 1916, when he and his brothers were drafted for World War One, the war to end all wars! Abbe Leclerc told them it wasn't their fight and to dodge the draft. "If they come for you, don't kill them but make them die if they insist." So they hid out in the woods for the next 3 years.

Adelard became a lumberjack. On his first day, while the other newbies grabbed their axes and rushed out to start chopping to make money, Gramps asked the foreman who was his best worker. "That small guy over there." So gramps went to the guy he'd heard was best and asked if he could spend his first day watching how he worked. The guy was so honored, he taught Adelard everything he knew. Adelard was very bright, invented many things and became a great wood carver later in life. He was the only person in his poll to vote for the Social Credit (Friendly Interest-free Credit) candidate during the Great Depression. He turned me on to Social Credit when he learned I had decided to work on money reform and run money interest-free like poker chips..

My mother Therese Turmel born in 1929 was the 6th surviving child of 12. They lived in a shack in backwoods Quebec and as the youngest, she got to listen while her older siblings did their homework around the kitchen table. She skipped 2 grades and then graduated from Teachers' College with top marks. She used to tell me she envied my love of math, her toughest subject. Later in life, I saw her report card and she had scored 100% in math while I had scored only 96% though I did come in the 98th percentile for Ontario high school graduates. Mom was the only person I ever knew who was sharper than me.

My father Bronislaw (Bruno) Twardowski born in 1924 was a Polish Displaced Person after World War Two who had fought in Italy at Monte Cassino. He only had a Grade 4 but was good with his hands and worked making steel at Dofasco in Hamilton after working in the mines in Rouyn Noranda where he had met my mother. He mended our shoes, screwed together broken hockey sticks, repaired the car, added an extra room on the house and built a cottage. Dofasco gave him a prize for suggesting an improvement. Grand-dad said "Bruno did good work fast."

CLAIMS TO FAME

Here's are some claims to fame where I saw what the whole world did not:

POLITICS

I have also been most prominent in politics and law relating to casino gambling in Canada and have been the subject of many legal and political precedents. In 1979, tired of being busted, I ran for Parliament to legalize

gambling. During that election, I was asked about inflation and wondered why my casino chips did not lose value and the government's chips did. Same hardware. After 40 days analysis, I concluded that interest caused inflation, it did not fight inflation, the Big Lie of Economics. So I proposed restricting the Bank of Canada's computer to a pure service charge and abolishing the interest charge to give everyone an interest-free credit card. Being the only engineer on earth specialized banking, casino banking, I saw it as my duty to continue offering to reprogram the errant money system. So my electoral program offered to get governments to run their currency systems like casinos run our chip systems by backing money up one-to-one with collateral with no interest to generate inflation or unemployment.

MIRACLE EQUATION FOR UNEMPLOYMENT=INFLATION = I/(P+I)

HOW "MORT-GAGE" INTEREST CREATES A DEATH-GAMBLE

P < principle, I < Interest, i < Interest Rate, t < Time, J < Inflation

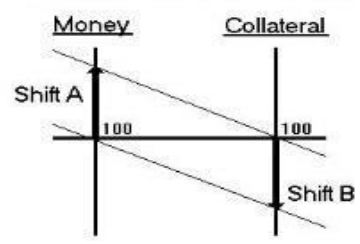

Production Costs (Principal)	100	P	1
Production Prices (Debt)	100+I	P+I	exp(it)
Purchasable Value (Survivors)	100/(100+I)	P/(P+I)	1/exp(it)
U=J: Unpurchasable Value (Non-survivors)	I/(100+I)	I/(P+I)	1-1/exp(it)
For Unemployment = 0, let:	I=0	I=0	i=0, t=0

If all borrowed P to produce their goods and then all charged P+I to pay the money owed, then only P/(P+I) survive and I/(P+I) do not. The media dubbed (I/(P+I)) my Miracle Equation predicting how many mort-gaged death-gamblers get knocked into unemployment "U." Like musical chairs with not enough money for all to survive, the odds of survival and elimination are always set by the interest death-rate and how much collateral is confiscated to reduce the backing that is inflated away is "J" for the interest rate "I."

INFLATION SHIFT A & SHIFT B

The equation for the minimum inflation (J) we must suffer is the same as the equation for minimum unemployment (U) because the fraction of the people foreclosed on is the fraction of collateral confiscated. If I=100%, half pay back double and half go broke to lose their collateral. If I=50%, a third go broke. If I = 20%, a sixth go broke.

INFLATION SHIFT A VS. SHIFT B

Though we are led to believe that inflation is caused by an increase in the money chasing the goods (Shift A), actually, it is caused by a decrease in the collateral backing up the money (Shift B) due to foreclosures I/(P+I). Though both inflation shifts feel the same, the graph shows inflation is not the inverse function of interest, it is the direct function exposing the Big Lie of Economics that interest fights inflation.

Economics teaches the inflation shift A is up on the left money side, I teach inflation shift B is down on the right collateral side. Economics only teaches up on the left, never down on the right. Why am I the only person in the world who noticed there were two possibilities, up on the left or down on the right?

RAISING COSTS CANNOT REDUCE PRICES

In the 1980s, when they raised interest to 22% to "fight inflation," I was the only politician who noticed that higher interest costs to producers will be passed along in higher prices to customers, not lower prices! But the world was successfully suckered to "raise interest to fight inflation." Most people who have not studied economics, if asked whether interest fights or causes inflation, are quick to agree that a merchant must pass on increased interest costs in his prices and therefore it is evident that increased interest costs will result in increased prices. <http://SmartestMan.Ca/biglie.htm> I'm the only person who teaches that inflation is not only "more money chasing the goods," Shift A, it can also be "same money chasing less goods" after foreclosure, Shift B! I've bet the Miracle Equation gets me the last Nobel Prize in Economics. Once the Economic riddle is solved, how to fix money, who needs prizes for coming close? <http://SmartestMan.Ca/bankmath.htm>

How they then accept politicians who tell them interest fights inflation is a measure of doublethink too. Giving more to the rich is the only orthodox way they know to bring prices down, for the rich. And they're doing it again. Google "fight inflation" and note how "raise interest" is the only way you'll hear about fighting inflation. If they're talking about fighting inflation and not killing it, they're really just coping with inflation, dancing with it. <http://SmartestMan.Ca/1974> is my poem explaining how Pierre Trudeau sold us out to the banksters and started the growth of our national debt.

Banking throughout history poem: <http://SmartestMan.Ca/poembank>

USURY BANKING SYSTEMS ENGINEER

In my over 100 elections contested, I've always put down for profession: "Banking Systems Engineer" Search for it, then add "Usury" and I come up first, the Usury Banking System Engineer

JESUS' DIFFERENTIAL EQUATIONS FOR HEAVEN LIKE HELL

In July 1995, I was voted Internet Kook of the Month for arguing that Christ spoke in Differential Equations! It really upset the online world! I had noticed that his most quoted (7 times) statement "To him who has abundance will more be given and from him who has no abundance, even what he has will be taken away" described what happens over time, a Differential Equation. No one ever figured out what takes from the negatives to give to the positives. $dB/dt=iB$ is the Differential Equation for Hell, taking from the poor to give to the rich. It's how interest on your bank account works! If you're positive with more than you need, they give you more. If you're negative with less than you need, they take it away. Taking from the poor to give to the rich is really Hell. So why would Jesus respond to "Why do you speak in parables" with "because of interest?" "Because this Hell of growing debts is just like what could be Heaven without."

JESUS WAS A DEBT-FIGHTER, NOT A SIN-FIGHTER

Ezekiel 18:22 explains that if you repent and atone, all your sins are forgotten. Forgiveness of sins is automatic if you repent and atone. So why would the Jesus ask Our Father for forgiveness of sins that can be automatically forgotten? The original Lord's Prayer actually says "Forgive us our debts" but was altered to "trespasses!" A debt is not a sin or trespass. Jesus was a debt-fighter promising Heaven in this world rather than a sin-fighter promising Heaven in the next.

Though the Parable of the Talents starts with "The Kingdom of Heaven is like..." and then has the Master citing the Differential Equation for Hell to demand his interest, I argue the master demanding interest wasn't Jesus but really the loanshark Master of Hell. Big Money took this parable as an approbation of usury thinking Jesus was the Master demanding his interest. But Jesus was actually the debtor returning the master's principal and stiffing him for the interest, a tactic I have used in my Stiff-the-Bank Anti-Foreclosure legal kits from the 1980s. We accepted responsibility for the Principal borrowed but repudiated the growth of debt for the interest never received. But making the loansharks think Jesus was okaying their usury kept the parable from being deleted from the Bible, unlike other alterations such as "sins" for "debts" in the Lord's Prayer and the recent deletion of "Let the exacting of interest stop" from Nehemiah 5:10. <http://SmartestMan.Ca/poembibl.htm>

Paul Corr II, 8:14 is the Differential Equation for Heaven: "Your abundance should at the present time be a supply for their want so that later, their abundance may be a supply for your want; in that way, he who gathers much doesn't have too much and he who gathers little doesn't have too little, that there be equality." $Db/dt=0$. In Heaven, zero is taken from the poor to give to the rich, the only difference between the Kingdom of Heaven like the Kingdom of Hell.

JESUS THE NAZARENE

There was no Nazareth in existence at the time of Jesus. But he belonged to a sect call the Nazarenes so mistaking that to mean he must have come from Nazareth was natural.

STIFF THE BANK KITS

In the 1980s, I started court fights to Abolish Interest Rates all the way to the Supreme Court of Canada. I also offered those being foreclosed under the 22% interest rates to self-defend with templates of arguments they could sign and file to stall their eviction. The Toronto Woodhouse case was stalled 33 months while they fought rent free!

PICKETING BANK OF CANADA EVERY THURSDAY

So I got my Abolish Interest Rate placard and made up Bankers are Crooks for my brother Ray and others for Mom Therese and Gramp Adelard and we picketed the Bank of Canada at Bank and Wellington at High Noon on Thursdays when the bank set the new interest rate for the next 5 years. .and then walked up Parliament Hill to picket the members entering Parliament. Many times Pierre Trudeau's limousine would come and discharge him and I'd bet Justin was in for the ride once in a while.

LETS (LOCAL EMPLOYMENT-TRADING SYSTEM) TIMEBANK

In 1984, I financed the first interest-free time-based currency software, the LETS Local Employment-Trading System for timebanking, Michael Linton. Do work for me, I pay you with an IOU for the time. It allowed single parents to log on and post what nights they could double-duty babysit each others' kids and pay each other with 1-Hour IOUs. The mechanic would take 3 Hours/hour in his shop, dentist take 6 Hours/hour in his chair making a support network around broke single parents. LETS is still often mentioned as the precursor of interest-free local community currencies whenever new community currencies are launched these days.

ANTI-POVERTY ENGINEER

At the dawn of the internet, if you googled for "Anti-Poverty System," LETS would come up. If you googled for "Anti-Poverty Engineer," John Turmel would come up first. No more but still there.

GUINNESS RECORD MOST ELECTIONS CONTESTED

In 1997, I was put into the Guinness Book of World Records for the most elections contested (41) and should also be for most elections lost (41). My Dec 12 2022 federal byelection in Mississauga-Lakeshore will be my 106th election offering interest-free credit cards. Losing never bothered me with such a great goal. Wikipedia has the list of elections missing only the December 2021 municipal byelection in Brantford Ward 1.

https://en.wikipedia.org/wiki/John_Turmel

EQUITABLE FREE BROADCAST TIME CHALLENGES

I'd bet probably I also hold the Guinness Record for most-arrested political candidate for objecting to being excluded from public debates by taking a seat until removed by officers with badges and guns. Youtube for "Turmel arrested." The Broadcast Act said free time had to be shared by all candidates on an equitable basis, quantitatively and qualitatively. When I was excluded from a broadcast debate, I'd complain to the CRTC and when they did nothing, drag them into Federal Court. Every judge ruled that my getting no time was still equitable! So I kept going back looking for a judge who would find that zero wasn't fair. Sadly, in 2009, the Supreme Court of Canada ruled Rogers TV had the right to exclude me from debates. <https://scc-csc.ca/case-dossier/info/sum-som-eng.aspx?cas=33319>

So, no matter how unusual and eccentric the "Great Canadian Character Anthology" (1985) says I may be, I can reassure you that my math remains unchallenged. <http://SmartestMan.Ca/antholog.htm>

DREAM TEAMS

In the last 2021 Canadian federal election, I produced a dream team of candidates at <http://smartestman.ca/c19team> most likely to vote to lift lockdown restrictions but couldn't break through the media filter to get the message of the Covid Mortality Hoax threat out. In 2015, the list had candidates from 12 Parties for Bank of Canada Accounts: "AB Abolitionist; AN Alliance du Nord; CA Canadian Action; CH Christian Heritage, FD Forces & Democratie; MJ Marijuana; ML Marxist-Leninist; PA Party for Accountability; PC Progressive Canadian; RH Rhino; UN United and IN Independents and some Greens. So LETS can bring different political factions together.

JUBILEE 2000

The Bible Jubilee calls for remission of debts every 50 years and Jubilee 2000 wanted the forgiveness of debts in the year 2000. Much was made of asking the United Nations Millennium Assembly for a Jubilee 2000. I did a tour of European LETS in 1999, my reports on my dozen lectures are at

<http://johnturmel.com/lp.htm>

It started at The Other Economic Summit (TOES) in Cologne with the G8 nations. At a Jubilee 2000 demonstration, I got to speak. And got a great picture. Notice the placard: Abolish Interest on Debt! Not Abolish Debt.

UNITED NATIONS MILLENNIUM ASSEMBLY UNILETS

The LETS software is why I was invited to speak in 2000 at the United Nations Millennium Forum in New York to replace the Gold Standard of Money with the Time Standard of Money. Resolution C6 in the Millennium Declaration seeks to "restructure the global financial architecture" with an "alternative time-based currency."

The name "UNILETS" and its greatest feature "Interest-free" were cut out by UN censors but "time-based" makes the point. You can't have inflation if your Hour is always worth 60 minutes of work. https://i-p-o.org/millennium_forum.htm Someday, your time will be your collateral, not yellow or silver rock! After all, it's your time that pays your way, not your yellow rock.

I tried to attend the U.N. Millennium Summit of Religious leaders, couldn't apply to get in without being an established religion, got evicted from a preliminary event at the Waldorf Astoria Hotel, and so picketed and passed out my "Abolish Interest Rates" literature.

Then I attended the U.N. Millennium Summit of Political leaders, and though I was not a head of state, the Sep 7 2000 New York Earth Times newspaper that came out during the summit and was distributed in all the downtown hotels had a centerfold page with pictures of Cuba President Fidel Castro, US President Bill Clinton, Saudi Prince, then King, Abdullah Bin Abdulaziz, UK Prime Minister Tony Blair, China President Jiang Zemin, Palestinian Chairman Yasser Arafat, Israeli Prime Minister Ehud Barack, and top picture, me, John Turmel captioned: "The lone activist outside the United Nations calling on developed countries to forgive debt owed to them by developing countries." If they had noted my placard: "Don't Cancel Debt, LETS Cancel Debt Growth" and "Jesus, Mohammed and Nehemiah said: Don't Lend Money At Interest," they would have known

I wasn't asking to forgive the debt of developed countries for Principal borrowed which they got to spend but only the debt for the interest not-borrowed they never got to spend. Still, I made the collage with an impressive coterie if world leaders!

Finally, there was the Millennium Youth Summit in December 2000. One of the participants was Darrel Von Slack from Barrie Ontario who had heard me give a speech to his class earlier in the year about UNILETS arranged by President of my Abolitionist Party of Canada Chris Boddy. There is a video of him stating: My friend John Turmel got the UNILETS resolution passed in the Millennium Forum Declaration and we should endorse it too. Though they voted for it, and for youth delegates to the UN, both those proposals were deleted from the final youth declaration!

3 NOBEL PRIZES

I've bet that not only will my Miracle Equation get me the last Nobel Prize in Economics, the LETS software will get me a Nobel Science Prize and the last Nobel Peace Prize. Once zero is taken from the poor to give to the rich, who will be fighting? Who will need police and armies? So I predict that some day, I'll get the Nobel Prizes in Science, and the last prizes for Economics and Peace.

FOSTER MERCHANT PROGRAM

In 1985, I used my Social Credit Party of Ontario to launch a Foster Merchant program trying to put the Money Mart check-cashers out of business. They would take 6% of a government check to cash it early and people needing the money now were its victims. Since most businesses had current accounts that paid no interest, I organised a network of merchants who could cash poor people's checks for full value since there was no rush to deposit them to get interest. I provided the victims with a photo-ID card with their thumb print on the back and they would put their thumb print on the checks before cashing. Our biggest Foster Merchant was Dave Booth's gas bar. If people weren't losing \$42 on their \$700 check, where do you think they bought their gas thereafter? And Dave only needed their thumb-print once with no need after the check had cleared. I issued over 500 ID-cards to match to a Foster Merchant. I was accused of doing it to win votes. You can find reports on the Money Mart challenge at <http://SmartestMan.Ca/prspol85.htm>

BUSBUCKS

<http://SmartestMan.Ca/busbucks> details videos of my 2010 Brantford mayoral campaign where I proposed paying students with bus tickets to do community service like shovelling snow. Bus Bucks were an ideal currency because they could be taken by all the stores and then given to the kids in change. All but one student said they would work for Bus Bucks. At a school debate, they cheered loudly, and though mayor Chris Friel saw they wanted bus bucks jobs, even his son Connor said he'd work for Bus Bucks, it was never implemented but paying with bus tickets was eventually started in Hong Kong.

GOLD NUGGET NETWORK MAGIC MONEY

LETS would hold monthly trading days where people came with goods and services they wanted to trade. One of the weaknesses was the lack of small denomination tokens to use. <http://goldnuggetnetwork.com> is my Gold Nugget Network with a flyer listing 200 stores that would give a discount for a generic Magic Money coupon I could sell for \$1 and use as \$1 currency. Easily started anywhere. It also includes my Ottawa Directory of over 1,000 stores.

HEALTH:

MARIJUANA PROHIBITION INVALID <http://SmartestMan.Ca/medpot>

In 2000, the Terrance Parker decision by the Ontario Court of Appeal ruled the prohibition on marijuana was unconstitutional and would be invalid absent a medical exemption for the sick within 1 year. In 2001, I was the only person to notice that Health Canada had not exempted Parker within the 1 year they were given! On the last day, they issued a form so he could apply for exemption. So no fix on time and the invalidation of prohibition took effect.

I knew the prohibition was dead but when Parliament was about to introduce a new “decriminalization” bill, I knew it would be a “recriminalization” and I would have to start all over. So I went on Parliament Hill in 2003 with 7 pounds of marijuana to get charged and fight to prove the law was dead. I also drafted Parker’s appeal and made the Crown drop 4,000 charges to prove the law was dead: <http://SmartestMan.ca/stay4k.jpg> But the Court of Appeal then said their fixing the exemption made the prohibition alive again. We've argued only Parliament can bring a law back to life once dead but all judges obeyed the new court-resurrected prohibition and continued convicting people anyway. I prepared templates to quash charges on the grounds only Parliament could bring dead laws back to life and many prosecutors chose to withdraw charges or offer sweet deals over the next 15 years. My list of early wins is at <http://SmartestMan.Ca/wins.htm>

In 2014, after 18,000 medpot patients had their Health Canada grow permits cut off by Federal Court Justice Manson based on the date of their permit, all grow permits were extended but only the second half of year kept their possession permits, first half lost their permits to possess what they had a licence to grow! With the media focusing on the 18,000 joyous survivors and ignoring the 18,000 devastated losers, I got almost 400 patients to file a \$2 Statement of Claim trying to get their exemptions back from Health Canada based on the fact their doctors had prescribed it and who cares what a judge thinks about dates? It swamped the Crown and the Registry. At trial, Crown said it was "remarkable, extraordinary, unprecedented" to have televised hearing in 10 provinces in 12 cities. A judge struck down the Exemption Regime in another case and dismissed our actions as handled or we could complain against the new regime again. No costs!

In 2017, a second group of almost 400 medpotters used templates to claim damages due to delay by Health Canada in processing medpot permits. You could fax your prescription to a Licensed Producer and get your pot by courier the next day but to self-grow, you had to send it to Health Canada who then took up to 11 months to process the paperwork while you paid rent on your grow site. I got another 80 to file motions for interim exemptions while waiting and Health Canada hopped to it to get them their permits to avoid the hearing before the judge. In those actions, Judge Brown named one Lead Plaintiff and what happened to him was persuasive for others. Except only 1 plaintiff would pay any order for costs and they're peanuts for self-defending sick people. Igor’s damages claim for delayed processing is filed in the Supreme Court of Canada as of Jan 2023.

In 2018, a third group of 55 high-dosage patients used templates to try to strike the 150 gram cap on possession after the Garber decision in B.C. allowed patients with 60, 100 and 160 grams/day to possess a 10-day supply. Judge Brown dismissed the Crown’s motion to strike and granted the Lead Plaintiff the same 10-day carry as the Garber decision. Sadly, the Federal Court of Appeal overturned his decision.

JOHN ARMSTRONG FASTING AND URINE THERAPY

Proverbs 5:15: Drink the waters of your own cistern! I am a leading advocate for Urine Therapy https://www.youtube.com/playlist?feature=edit_ok&list=PLYEOvpWV5TtU_Uqr2dTTg3iHg3u_JLf8u is my playlist of videos detailing my 4-month 18-week 126-day fast on nothing but urine and feasting once a week to lose 48 pounds. It explains how urine is not a waste product but a cleanser with useful enzymes, hormones, vitamins, minerals, stem cells. Like milk is a blood product from the mammarys, urine is a blood product from the kidneys. Would God have placed a waste outlet right over the birth canal? Or would it be a cleanser outlet? I once did 28 days with only kidney milk and no feasting at all suffering no hunger.

GELATIN TO PLUG LEAKY GUT AND REBUILD BONE

My other great health tip is my video on Gelatine! Jello-Deficiency Syndrome: Leaky Gut, Auto Immune, Asthma, Arthritis, MS Gluten Intolerance. Harvard Medical School in 1993 gave half of their 60 patients needing joint replacement surgery an ounce of gelatin. They all got better needing no surgery, the half who did not get gelatin did not get better. Gelatin prevents arthritis, rebuilds joints. <https://youtu.be/6w197jYvadv>

VITAMIN B17

Vitamin B17 from apricot seeds is an inert molecule of cyanide whose bindings are dissolved upon meeting a certain enzyme on cancer cells. So it's like a mine that only blows up cancer cells. World Without Cancer details how it works. <https://www.amazon.ca/World-Without-Cancer-Story-Vitamin/dp/0912986190> with the Youtube video at <https://www.youtube.com/watch?v=tPADSv3XAv0> It convinced me decades ago. Dr. Jane Ruby just did a video on it: <https://rumble.com/v3vzmaj-vit-b17-laetrile-natural-cancer-treatments.html>

INCLINED BED THERAPY

Phenomenal Health Benefits Of Inclined Bed Therapy One Radio Network Interviewing Andrew K Fletcher <https://www.youtube.com/watch?v=x68PLE8MXJE> Brilliant engineer fixes varicose veins in a month!!! Just raise the head of your bed 6 inches for the many benefits of vertical gravity. <http://inclinedbedtherapy.com>

GROUNDING

In days of yore, many people walked bare-foot and slept on the ground. So they were often "grounded." Recent research has found that grounding does enhance health so long ago, I made myself a grounded mat with some screen, a grounded cable with the two power leads pulled off and only the rounded grounded lead to plug in, a cardboard base and duct tape. It's under my desk and my bare feet let my body experience zero volts.

THINGS I NOTICED FEW ELSE DID:

BIBLE CHARACTERS FOUND IN AMARNA LETTERS

Evidence of Bible characters had never been found in archaeology. Not Solomon's magnificent temple, not his palace. They looked hard and they've never been able to find proof and have given up to conclude all these Bible characters must be pure myth. David Rohl's book "A Test of Time" found characters from the Hebrew United Monarchy in the Egyptian Amarna Letters of pharaoh Akhenaten.

Unfortunately, Iron Age 22nd Dynasty Shoshenk was pegged to 925 when Shishak plundered Solomon's Temple because Shoshenk sounds like Shishak. This pushed the real Shishak from a previous dynasty back 350 years in time. The Bible characters were actually found in the Amarna Letters!!

The Bible cast of characters includes

1) father Saul, 2) son Ish-Baal "Man of Baal," 3) his General Baanah for Israel; 4) father Yishay 5) son David, 6) General Joab from Ashteroth for Judah.

The Amarna cast of characters includes 1) father Labaya, 2) son Mut-Baal "Man of Baal," 3) Benenima, 4) Yeshuya, 5) Tadia, 6) Ayab mayor of Asterot.

With 250 possible names in the Amarna Letters, what are the odds Amarna Letter EA256 would have son of Lion Man Labaya Mutbaal "Man of Baal" linked with Ayab, Yishuya, Benenima, and Tadia as we have son of Lion Leader Saul Ish-Baal "Man of Baal" linked with Joab, Yishay, Baanah and David?

The chance of Amarna Letter #256 referring to 6 Bible characters out of 6 is $6! / 250^6$ where ! is Factorial, So $6! = 6 * 5 * 4 * 3 * 2 * 1 = 720$ and $250^6 = 244$ trillion.

Chance $6/250 * 5/250 * 4/250 * 3/250 * 2/250 * 1/250 = 720$
 $720 / 244 * 10^{12} = 1 / 340 * 10^9$

So 340 billion to 1 against picking 6 out of 6 names from 250 to match the Bible cast of characters. The chance of picking Lion Labaya to match Lion leader Saul, Mut-Baal to match Ish-Baal; Ayab to match Joab: Yeshuya to match Yishay: Benenima to match Baanah; and Tadia to match David would be 340 billion to one against.

Saul and Labaya both fighting and losing to a King of Gath named "Sun has Given" and dying at Mount Gilboa is a nice extra. How many hills are there they could have died on?

When you consider the extraordinary odds of so many parallels between the Saul and Labaya biographies and their coteries, the Great Canadian Gambler, TajProfessor must bet that Saul and Labaya are not two different people living the same lives with the same family and friends three centuries apart but are the same person and David Rohl is right!

<https://www.amazon.com/dp/B09K26HNM2> is my book "Who was Shishak The Great, Plunderer of Solomon's Temple?" If King Labaya in Amarna Letters is King Saul. Labaya and Saul are:

SAUL/LABAYA

- [1] both are associated with Great Lion;
- [2] both were new to kingship;
- [3] both had shrine to their god in their home towns
- [4] both home towns taken;
- [5] both home towns taken back;
- [6] both use Hebrew "nemelah" for ant,
- [7] both use the infinitive absolute after a finite verb;
- [8] both have same expansion to attack Megiddo;
- [9] both have outlaw mercenaries at Shechem;

- [10] both have same cities in existence;
- [11] both have son accused of consorting with the outlaws;
- [12] both face Gath coalition;
- [13] both face Gath leader named Sun Has Given;
- [14] both lose to Gath;
- [15] both not taken alive;
- [16] both have Bethshan occupied by Gath;

ISHBAAL/MUTBAAL

- [17] both have 2 sons left;
- [18] both die at Gina/Mt. Gilboa;
- [19] both have son named Man of Baal;
- [20] both sons know Ayab/Joab would be known by Jeshuya/Yishay, Benenima/Banaah; Tadia/David.
- [21] both would use Biblical Hebrew "ganab,"

DAVID/TADUA

- [22] both have Tianna/Zion as enemy from the mountains;
- [23] both have Tianna/Zion beat Gezer at Manhatu/Manahath;
- [24] both have Tianna/Zion not taking Gezer;
- [25] both have Tianna/Zion fight Aziru/Hadad-Ezer;
- [26] both have same expansions for Aziru and Hadad-Ezer;
- [27] both have Hittite general from Pakku.
- [28] both, 85 years later, have Shalem plundered.

SHISHA/ RAMESES

- [31] Sisak/Shishak
- [32] Shashak Assaulter
- [33] Genealogies
- [34] The city the king plundered in Year 8: Shalem
- [35] Rebels surrender on hills

85 years after Saul died was when Shishak plundered Jerusalem. 85 years after Akhenatan, the Pharaoh was Rameses The Great who built the most and biggest monuments. And now you know why he was the Great. He had plundered the biggest gold hoard in history.

Two dozen coincidences between the Bible United Monarchy and the Amarna Letters 350 years earlier say it's 2 octillion (2×10^{27}) to one that the Late Bronze and Iron Ages are wrongly placed in the historical timeline. Rameses claiming to have plundered Shalem is the icing on the new cake.

LEE HARVEY OSWALD TESTED NEGATIVE FOR GUN-POWDER

D.A. for New Orleans Jim Garrison says the accused assassin of Kennedy tested negative for nitrates! Doesn't that change everything?

NO GULF OF TONKIN BULLET HOLES

The Vietnam war started when North Vietnam PT boats were accused of attacking the US destroyer Maddox. Ten years of war ensued with no one noticing they found no damage or bullet holes? Looks like I'm the first and only.

FLAT EARTH

My video <https://youtu.be/slOhe35wNWs> "Flat Earth Easy To Prove" has been taken by some who didn't watch it as my approbation of the Flat Earth theory. It is not. Using Newton's inverse square distance law, it would be easy to prove a flatter non-spherical Earth but no one can do it. Say the earth is a puck. If you are over the center of the puck, half its thickness away, you would experience a maximal force of attraction straight down. If you were at an edge, you would be double the distance to the center of the mass. If it's twice as far, you'd feel a quarter of the pull straight down. And if you were on a top of an edge, you would experience even less pull at an angle toward the center of the mass. So all you have to do to prove non-spherical earth is to find a place where things fall slower and sideways. Easy to prove, right? Even if no one ever will thus not disproving spherical globe.

XX GAMES FOR WOMEN'S SPORTS

20210212 Do not exclude XYs from XX Games but do include XX only

<https://rumble.com/ve0oa9-do-not-exclude-xys-from-xx-games-but-do-include-xx-only.html>

If the talk is about excluding trans XYs, it's a Human Rights Issue. If it's about only including XXs or under such age or weight class, no rights issue. You must qualify for inclusion in the class. What kind of man can't beat the other men but wants to win trophies beating women? Transgender men still have XY chromosome no matter how they feel. Some sporting events have the testosterone level as qualifier. So laws forcing XX women to let transgender XY men participate should result in no more XX girls winning any ribbons or medals. Of course, since games are already qualified by weight class, age class, why not chromosome class? XX Games allow XX women to compete with only XX women, no XY women. If not, women's sports will be destroyed by the Democrats.

HIGH-RISE BALCONY-TO-BALCONY FIRE ESCAPE LADDER

This is just a great idea I recently sent to 20 ladder companies:

For tenants in upper stories of high-rise buildings with balconies.

You could transform your foldable or multi-position ladders into fire-escape ladders by adding two fold-out hooks on one end.

In the event of a fire, I could hang it over my balcony and step down to the next balcony.

Then lift it and bring it down to that balcony and hook it again and go down to the next.

As well, I could put it between two balconies on the same floor if there are flames below and move laterally.

Finally, maybe a safety belt in case of fall.

I could think that many people in balconies above the range of fire-truck ladders would want such a life-saving device as well as a useful step ladder in home.

SOCIAL MEDIA SECTION 230 IMMUNITY

Why social media S.230 immunity for non-foul speech? If social media platforms have immunity from being sued if they keep foul speech off their platforms, why immunity? To allow them to make censorship mistakes. <https://rumble.com/vduih9-why-social-media-s.230-immunity-for-non-foul-speech.html>

NO FRAUD BALLOT TRUMPS COMPUTER VOTE FRAUD

<http://SmartestMan.Ca/nofraudballot.htm>
<https://www.youtube.com/watch?v=gG49CUiHHGE>

On Oct 23 2014, I wrote to the Ontario Elections Parties Advisory Committee Elections Officer Greg Essensa proposing a simple user-traceable ballot re-design to eliminate computer vote fraud:

<< With the recent exposure of vote fraud in the United States, I've given much thought on how the voter can be sure his vote went to the right candidate despite the possibility of secret vote-flipping software without having to change any code! By changing the ballot!! Preventing computer miscounting can be guaranteed in the following way:

When I get to the poll, I pick a blank envelope with a numbered ballot out of a barrel, randomizing that element too. The ballot's ID number could be on a detachable stub for me to take home.

Then, election evening, all the numbers are posted online so I can check to see that my ID number matches my vote. Should it not, I could complain about the discrepancy. Should someone ask for proof, I could produce the carbon copy of the ballot. So a carbon copy ID-numbered ballot eliminates all chance of the computer miscounting! Hoping you institute a sure-vote ballot, I am Sincerely yours John C. Turmel >>

Neat, isn't it? Even if crooks have the software to flip the vote, it can't be done without being exposed!!!

Mr. Essensa said they dismissed the idea because it gave up too much cherished secrecy in the election process. Nice of him to want to keep how I voted a secret from me. Because no one but me would have the carbon copy with serial number. And only I could choose to give up such secrecy to prove my vote wasn't registered right. But that was Mr. Essensa's pretext to keep the vote count corruptible rather than incorruptible. Ontario's Chief Elections Officer isn't interested in a simple low-tech way to prevent computer vote fraud because it has to be so secret that I can't find out whom I voted for. It's really that easy to ensure accurate vote count. Just another example of John The Engineer coming up with the ideal and being stuck with functionaries who don't get it.

You'll need to understand them to stay with me. I also included the Bible's two greatest free health tips, fasting and urine therapy. And finally how the interest-free window at the Bank of Canada could be used to pay our damages for Trudeau's incompetence in being tricked by an Apple-to-Orange comparison.

GLOBAL WARMERS HIDE COOLING

While the world may have decried the global warming hoaxers after the ClimateGate emails in 2009 caught them using a "trick to hide the decline." I do not find fault with a scientifically elegant trick being used but am the only one to find fault with them "HIDING" the decline. And I do find fault with politicians who remain duped. <http://SmartestMan.Ca/globalwarming.htm> The greatest indicator of fraud is when they move the goalposts. Remember when the problem was global warming? Now it's "climate change," cooling too. So now

they're right whether temperature goes up or down. They used to condemn those who denied climate warming, now they condemn those who deny climate change. Can you name one person who denies that climate changes? And yet all those nobodies are being condemned by the hoax media. How stupid is the world to go from opposing temperature warming to opposing temperature change. I'm too smart to fall for that. Did you? We'll know for sure if we end up needing less air conditioners and more furnaces.

BLM BLACK LIES MATTER

When Black Lives Matter were rioting over more unarmed blacks being killed by cops, Tucker Carlson reported 10 such deaths in 2019! No one except me bothered to find out how many were killed before 2019 for 10 to now be a crisis and only A.G. Bill Barr mentioned there were 38 killed in 2015! So killings went down 70% under Trump while Black Lies Matter rioters claimed killings had gone up! After 40 years of Human Rights Tribunals, I can't believe any systemic racism was left unchallenged by all those generations of Star Trekkies for whom alienism, let alone racism, was frowned upon. This data can still be used to discredit Black Lies Matter at any time. Checking the down-trend to spot that cop killings had gone down, not up, doesn't take that much brilliance except no one else did it. It may not show I'm that smart but it sure shows America is that not-smart.

TRUMP NAZI SMEAR

When President Trump said there were "fine people on both sides" of the Charlottesville statue protests, the Democrat MainStreamMedia omitted that he had then specified "the statue people, not the Nazis" and reported that the "fine people" were the Nazis fighting with Antifa on the other side.

On Nov 9, five days after the election, Dilbert's Scott Adams said 3 times in Youtube Episode 1182 that if Trump had only just done this one thing, it would have won him the election. I'm the only person who saw the winning response and made a video "Lift the Charlottesville Nazi Target off Trumpers' backs" on Oct 13, 3 weeks before the election. <https://www.youtube.com/watch?v=48A3jkRIPFE>

Imagine you're watching a high-school basketball game on TV at your university and opine out loud about a gorgeous young cheer-leader: "I'd love to bang her when she turns 18!" Someone tapes it and cuts out the "when she turns 18" and plays the Lie of Omission all around campus. You get beaten up by some anti-pedo vigilantes, get called to explain to the Senate why you should not be expelled for your pedophilic tendencies. What's your best defence to the Lie of Omission? Play the omitted part! The only way to defeat a Lie of Omission is to play the omission.

My winning move was to play the omitted 6-second line "not the nazis" <https://youtu.be/KPZyLE14fI4> to their faces and demand apology for their lie by omission having caused the murder of a Portland kid. All his mom heard on the news that night was "No one's going to mourn a dead Nazi." Demanding apology for a lie of omission that got the kid killed was Trump's ultimate Ace. Scott Adams says to tell them to check the transcript then come back to apologize. I play it to their face and demand apology now. Sadly, Youtube took down my video with no community strike. Quietly! Surreptitiously. My video <https://rumble.com/vf0o03-youtube-downs-how-trump-wins-video-quietly-no-strike.html> explains. If Trump had seen the video, would he have won the election as Adams says! Decide for yourself: I posted the deleted video at Rumble: <https://rumble.com/ve4xp1-lift-the-charlottesville-nazi-target-off-trumpers-backs.html> This, like Black Lies Matter death data, will hang over Democrat heads forever. They can always be made to apologize.

Lift the Charlottesville Nazi Target Off Trumpers' Backs explains how to play the part the Dems omitted "Not the Nazis" to their faces and demand apology right then for being duped by a Lie of Omission smear they wanted to believe and so didn't not verify! So <https://rumble.com/ve4xp1-lift-the-charlottesville-nazi-target-off-trumpers-backs.html>
Dead Dems Walkin! Two Boss Trump Cards <https://youtu.be/pWLqrd72UfM>

Most interesting in the Trump era is the exposure of the Deep State most people were unaware was running their world. A.G. Bill Barr let FBI Director Comey off the hook and all of the major Spycast conspirators escaped justice. Only one junior lawyer was convicted of changing a CIA letter from "Carter Page does work for the CIA" to Carter Page "does NOT work for the CIA," thus getting the FISA warrant to tap everyone whom Page contacted in the campaign and everyone whom they contacted. Most people don't know that a FISA "doublehop" warrant gets the calls and messages of not only Carter Page and everyone he contacted, 1st hop, but also everyone they contacted, 2nd hop. If Page spoke to Ivanka, did she speak to Don Jr.? If Page messaged Don Jr. or Eric, did they message Don Sr. The more people Page contacted in the campaign, the greater likelihood of netting President Trump. So the kid who inserted one "Not" caught Trump in the net and he was given probation, no jail, and is back in his law practice! So nobody involved in the RussiaGate coup did any time. See my video: Clinesmith Gets Probation for Tapping Trump

<https://rumble.com/ve0bxj-clinesmith-gets-probation-for-tapping-trump.html>

And of course, the "Time Magazine Cabal" hired an "army of poll workers" who would be needed to "protect the election" when the Dominion voting machines rejected large numbers of ballots to be sent for human adjudication by their "army of poll workers." The steal is statistically evident. Suppressing the Hunter Biden laptop story saved the Dems 4% who wouldn't have voted for Biden if they'd known about the Big Guy's cut of the Ukrainian loot. The lead was so small everywhere that only Big Brother suppressing that one story stole the election from Trump. 50 intel officers said it was Russian disinformation. Big Brother is now calling it a Big Lie to say the Time Cabal army of poll workers and Main Stream Social Media suppressions stole the election! Big Brother fixed the race. They're proud of having help cheat Orange Hitler and only Trump playing the tape can shame them.

COVID MORTALITY HYPED HUNDREDFOLD

What may be my greatest claim to fame is my catching WHO comparing the 3.4% Covid mortality rate to the 0.1% Flu mortality rate without telling us it was the Covid 3.4% CFR (Case Fatality Rate) to Flu 0.1% IFR (Infection Fatality Rate) to hype the mortality a hundredfold. Not one doctor or scientist on Earth noticed how we were tricked but I did!

On Jan 19 2021, I filed a Statement of Claim asking Federal Court of Canada to declare Covid restrictions unconstitutional because they Apple Oranged the Covid mortality threat a hundredfold. The flyer I handed out at 11 different demonstrations:

COVID APPLE ORANGE RESISTANCE

<http://facebook.com/groups/AppleOrangeResistance>

COVID APPLE ORANGE RESISTANCE <http://SmartestMan.Ca/c19>

When we're told: "Lockdown is for your own greater good," it's no answer to chant "We need freedom," or "It hurts too much." But causing a false alarm by fudging the numbers to hype the threat a hundredfold and lying about symptomless spread is good reason for righteous anger.

Not knowing when Apple is compared to Orange can trick people. You didn't know WHO compared the Covid CFR Apple to the Flu IFR Orange. My book at Amazon <http://amazon.com/dp/b09dfgld8d>

Covid Mortality Hyped Hundredfold details my Federal Court of Canada Statement of Claim <http://SmartestMan.Ca/c19scjct.pdf> that argues the threat was an false alarm making any restriction unconstitutional grounds:

- 1) WHO's comparing the Covid 3.4% "Apple" CFR "Case Fatality Rate" not to Flu's known 10% CFR "Apple" but to the 100-times smaller Flu 0.1% "Orange" IFR "Infection Fatality Rate" exaggerated the threat by a hundredfold;
- 2) CDC said masked social distanced lockdowns were needed when "most coronavirus cases spread from people with no symptoms." An asymptomatic spreader would unknowingly infect clusters of family and friends. WHO found "NO documented asymptomatic transmission." Wuhan tested 10 million with ZERO asymptomatic spread;
- 3) On Nov 15 2020, CTV reported 10,947 deaths had 10,781 in long-term care (98.5%) omitting the difference of only 166 deaths (1.5%) not in long-term-care! Now deleted from their online video. 166 deaths from 38,000,000 nonlong-term-care Canadians is 0.00044%: 1 in 230,000! Old, fat, diabetic and vitamin-D-deficient die, almost no healthy Canadians. Ontario reported 1 death under 20-years-old so the idiots closed down the schools to prevent a second.
- 4) On Mar 24 2020 CDC hyped the deaths by changing the death certificate guidelines to count deaths by murders, suicides, accidents WITH Covid as FROM Covid. Their site admits only 6% died FROM Covid alone.
- 5) The number of cases was hyped with many false positives from PCR machines set too sensitive. Tanzanian President John Magufuli submitted goat, sheep and papaya samples that tested positive. Rest in Peace Mar 18.
- 6) France's Didier Raoult used 1 gram of HCQ and lost only 0.8% of patients. Bill Gates' UK Oxford Recovery test used 9.6 total grams to lose 25.7%. Ten times the overdose was really murder on Bill Gates' patients.

Thinking those protected by vaccination are threatened by the unprotected, like someone with an umbrella worried about getting wet if others don't have umbrellas too. Can we trust injections from those putting fluoride in water, aspartame in kids' sweets?

All the world's doctors and elected politicians missed the Apple-Orange comparison and only Guinness Record never elected-politician John The Engineer Turmel did not. Other plaintiffs joined me. The Court hit me with \$3,000 in court costs and them for \$500 each. If you think we should not be punished for trying to warn you Covid was a false alarm, please donate to johnturmel@yahoo.com to our cover court costs for trying.

<http://rumble.com/v1jzi3l-gofundme-for-federal-court-of-canadacovid-false-alarm-costs.html>

FAUCI FALSE ALARM

SmartestMan.Ca/fauci

	FLU	C19
C.F.R. (Apple) Case Fatality Rate	10%	3.4%
I.F.R. (Orange) Infection Fatality Rate	0.1%	??

When Fauci said Corona death rate "thirty times the Flu,"
Would you've hit panic button sounding the alarm bell too?
Had Fauci told the truth, it's really only third as bad,
Would you've hit panic button sounding the alarm so sad?

Can't blame the Chief Executives for sounding the alarm,
It's not their job to check if expert models do more harm.
But a Chief Engineer must check the model blueprint out,
To find out Fauci fudged the metrics. False alarm! to shout.

The Case Fatality Rate (CFR) who die of Flu,
Is "10%" in hospitals, a tenth don't make it
through.
While (IFR) Infection Rate Fatality of all
Is 10th of 1% , Point One, a Thousandth, very small.

When WHO said Covid CFR was 3.4%,
One-third the 10% of Flu, Good News was heaven sent.
But Fauci Apple-Oranged 3.4 to Flu's Point One
Fear Factor amplified a hundredfold when scam begun.

The Gateway Pundit "apples not to apples" first complain,
I checked and found an Apple to an Orange was the stain.
How will a world of scientists admit to being fooled,
By ruse most elementary we thought them very schooled?

March 24, the CDC changed Cause of Death to do,
So Death with Covid, not from Covid, is the guideline new.
Subtracting murders, suicides, and accidents from count,
Shows only six percent of stated deaths is true amount!

The CDC said half transmitters had no symptoms seen,
Not knowing who's a threat, the answer is to quarantine.
Social distance remedied the never knowing who,
Would be infectious, even though they would be very few.

On April 2, WHO said that "after long time searching spent,
Asymptomatic is transmission we can't document."
10 million tested in Wuhan proved CDC was wrong,
Found ZERO symptomless transmitters passing it long.

June 8 WHO said again it won't transmit without a sneeze,
Like Flu, no symptoms is no danger. Coping's now a breeze.
It's easier into a scam the simpletons to coax,
Than to convince them that they have been taken by a hoax.

It feels like we escaped a plague that came so very near.
A panic justifiable; now hard to break the fear.
Admit it's "not so bad" to end imaginary Hell,
We must shake hands and hug again to break demonic spell.

UNLESS YOU'RE SNEEZING. DUH!

"We made a big mistake" said Dr. Bridle in alarm,
"We didn't know the spike could travel, heart and brain to harm."
When spike attaches in an artery, we find the flow,
Impaired enough to have the blood clots start around to grow.

Clots start in capillaries so you'll not yet feel the threat.
As pumping blood gets harder, watch as bigger clots you'll get.
With capillaries clogged by clots from spikes, it may be said,
If you and kids took jab, your clots now make you Walking Dead,

When Trudeau deemed the clot shots Safe, Effective, not to fret,
But "unVaxed can't ride with the Vax Protected: Danger yet."
If Vaxed are not protected, then it's sure Effective NOT.
Our fool Prime Minister, in contradiction has been caught.

Would you have taken jab if Crown Ben Wong had Trudeau told,
Covid Mortality was over hyped by hundredfold?
Would you have taken jab if Justice Crampton had us told,
That Apple Orange were compared to hype by hundredfold

Would you have taken clot shot if Judge Aylen said: Behold
The CFR to IFR's too small by hundredfold
Would you have taken jab if Justice Zinn had us all told,
Comparing Apple Orange hyped the threat by hundredfold.

Would you have taken jab if Randy Hillier had you told...
Would you have taken clot shot if Max Bernier had you told...
Would you have taken jab if Julie Ponesse had told...
Would you have taken jab if MPPs had us all told...

My book Covid Mortality Hyped Hundredfold <https://www.amazon.com/dp/b09dfgld8d> has my Statement of Claim and other pleadings. You'll need it if you want to refuse to take the clot shot because clogged arteries are dangerous in response to a virus with a hoax mortality rate that is not dangerous.

INVERTS OF UNITY

My Covid Statement of Claim even included a link to <http://SmartestMan.Ca/inverts.htm> Inverts of Unity lesson on how to easily convert decimals to fractions and back. It's Chapter 1 in my upcoming Poker Power Tools book.

BELL CURVE USE

It also shows how to use the Bell curve to find out what to expect how often next time. My video "TajProfessor Great Canadian Gambler's Crystal Bell Ball" further explains how I've used the Standard Normal Bell Curve crystal ball to predict what will happen based on what happened with only sample size and mean.

CENSORSHIP

SHADOWBANNING

I tried getting the Black Lies Matter claim of more cop killings when there were 70% less killings by Trump's police to a couple of hundred of his supporters on Twitter, Facebook, Youtube. Not one noticed and mentioned it. I tried getting how to lift the Nazi smear off Trump and their backs to them too but none noticed. Were Trump and his supporters that stupid to not notice? Or did the social media shadowban my posts so no one saw them. I can only conclude that none reacted to the Aces I was displaying because they didn't see them.

YOUTUBE

The best proof is Youtube taking down my "Not the Nazis" video without an announcement! Had Trump seen it and dispelled the Nazi smear, the effort to cheat Orange Hitler would have come to naught when it was shown he wasn't Orange Hitler. But when the Cabal's takedown of Trump is finally known, what an epic exposure of the powers that will be. Five of my Covid videos have been removed and can only be seen at Rumble:

<http://SmartestMan.Ca/kotp> videos index.

YOUTUBE CALLS 911 ENGINEERING ANOMALIES HATE SPEECH

This year 2021, Youtube took down my 2011 video on 911 Engineering Anomalies as "hate speech!" I appealed pointing there was no identifiable protected group I could have made people hate. Sure, readers may learn to hate bad engineers who said 1) Jumbo jets can do 500mph in dense sea-level air; 2) gasoline melts steel; 3) Aluminum tube pierces steel-concrete barriers to come out the other side, but those engineers are not a protected group and I have the right to hate their crooked guts out loud. Youtube checked and still considered 911 opinion hate speech.

FACEBOOK

In Jul 2021, my Facebook “Trump Twits” page where I had my 5 years of commentary on US political activities was taken down for violating community guidelines without telling me how. My Covid groups have had their exposure reduced for violating community guidelines, whichever, they didn’t say.

DISQUS

Disqus is a platform that censors me from commenting on their 750,000 major sites around the world. The sites don't have to bar my comments, Disqus does it for them without even telling them. That’s pretty centralized censorship by a platform that no one has yet noticed. If you think being unfollowed can stunt communication, imagine being prevented from commenting almost everywhere. <http://SmartestMan.Ca/disqus.htm>

NEED MORE EVIDENCE?

Does SmartestMan.Ca need more examples of where I am right and the whole world is wrong?

Interview with Michael Arana Nation recapped my career highlights:
